Executive Summary

Introduction & Purpose

Texas Health Resources is pleased to present its 2022 Community Health Needs Assessment (CHNA) for the Tarrant/Parker Region in the Dallas/Fort Worth area. This CHNA report provides an overview of the process and methods used to identify and prioritize significant health needs across the Tarrant/Parker Region's service areas federally required by the Affordable Care Act.

The purpose of this CHNA is to offer a deeper understanding of the health needs across the region and guide Texas Health's planning efforts to address needs in actionable ways and with community engagement. Findings from this report will be used to identify and develop efforts to address disparities, improve health outcomes, and focus on social determinants of health to improve the health and quality of life of residents in the community.

Acknowledgements

The development of Texas Health's CHNA was a collective approach that included Texas Health employees, community-serving organizations, and community members from within areas of focus that gave us input and knowledge of issues and solutions and those who share our commitment to improve health and quality of life. The 2022 CHNA planning effort pushed Texas Health beyond our traditional primary service area to directly impact prioritized health needs in areas of the community with greatest health needs. This was an integral step to ensuring our ability to understand the needs of the community and develop programs and services that will positively impact the health and well-being of those we serve.

Letter from Our CEO

Improving the health and well-being of our communities is a journey, not a race.

Texas Health develops a CHNA every three years to help us build programs that meet the specific needs of our communities. We collect data through windshield surveys, community readiness assessments, and in-depth interviews with community leaders and residents to obtain a better understanding of their needs.

Behavioral health, chronic disease, access to health services, and healthcare navigation and literacy continue to be prevailing issues in the communities served by Texas Health.

That's why instead of turning our focus elsewhere, we're diving deeper into these issues to address the health disparities and social and environmental conditions that affect overall health and well-being.

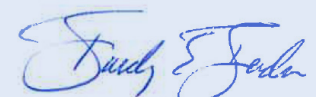

In this report, we're going to share our approach to how we have moved towards addressing challenges by focusing on solutions.

You'll see the prevailing issues we've identified in various communities such as depression, high blood pressure and lack of health insurance. We've also explored the social determinants driving those negative health outcomes, such as isolation and lack of public transportation and access to healthy food.

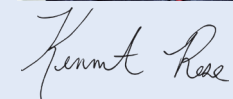

The 2022 CHNA report highlights the community voice and represents our vision — partnering with you for a lifetime of health and well-being. Because we believe that collaboration is at the core of every solution.

By working together, we continue to make a difference.

Sincerely,

Barclay Berdan, FACHE,
Chief Executive Officer,
Texas Health Resources

Kenneth Rose, MBA
President/CEO
Texas Health Hospital
Mansfield

Regional Leadership Councils

Texas Health Community Impact Leadership Councils represent five unique regions in the Texas Health service area; Collin, Dallas/Rockwall, Tarrant/Parker, Denton/Wise, and Southern (Ellis, Erath, Hood, Johnson, and Kaufman counties). Texas Health Community Impact Leadership Councils are comprised of community leaders responsible for recommending outcome-driven programs and collaborations. The Texas Health Community Impact Board was created to serve as a system-wide strategic advisory group as well as a fiduciary board, who in 2022 was responsible for allocating \$8.0 million dollars across all five regions. In the Tarrant/Parker Region \$2.0 million was allocated.

Texas Health Community Impact brings together agencies from different sectors — education, healthcare, government, grassroots organizations and others — to make measurable change in communities where social determinants of health contribute to poor overall health. These investments are designed to improve the health of the most vulnerable and underserved. Efforts are currently focused on connecting people to appropriate resources that help address behavioral health and food insecurity, which the pandemic exacerbated. The Texas Health Community Impact Board allocates funding to the Leadership Councils based on the regional strategic plans. The Texas Health Community Impact Leadership Councils award the grants to specific projects.

The following organizations are represented on the Texas Health Community Impact Tarrant/Parker Leadership Council for the Tarrant/Parker Region. These organizations were actively engaged in the prioritization process for the region.

- Charles Schwab
- Higher Praise Family Church
- Byrne Construction
- Mt. Olive Baptist Church
- United Way Tarrant County
- Community Enrichment Center
- Tarrant County College
- Arlington Tomorrow Foundation
- Bachman Lake Together
- Leadership Fort Worth
- Weatherford ISD

Consultants

Texas Health commissioned Conduent Healthy Communities Institute (HCI) to support report preparation for its 2022 CHNA. HCI works with clients across the nation to drive community health outcomes by assessing needs, developing focused strategies, identifying appropriate intervention programs, establishing monitoring systems, and implementing performance evaluation processes. To learn more about Conduent Healthy Communities Institute, please visit <https://www.conduent.com/community-population-health>. The following HCI team members were involved in the development of this report: Eileen Aguilar, MS – Public Health Consultant; Margaret Mysz, MPH – Community Data Analyst; Olivia Dunn – Community Data Analyst; Samreen Fathima, MPH – Research Associate; Clarice Pan – Research Assistant, Gautami Shikare, Research Assistant, MPH and Dari Goldman, MPH – Senior Project Specialist.

Introduction

Texas Health Resources Health System

Texas Health is a faith-based, nonprofit health system that cares for more patients in North Texas than any other provider.

With a service area that consists of 16 counties and more than 7 million people, the system is committed to providing quality, coordinated care through its Texas Health Physicians Group and 29 hospital locations under the banners of Texas Health Presbyterian, Texas Health Arlington Memorial, Texas Health Harris Methodist, and Texas Health Huguley. Texas Health access points and services, ranging from acute-care hospitals and trauma centers to outpatient facilities and home health and preventive services, provide the full continuum of care for all stages of life. The system has more than 4,100 licensed hospital beds, 6,400 physicians with active staff privileges and more than 25,000 employees. For more information about Texas Health, call 1-877-THR-WELL, or visit www.TexasHealth.org.

Mission

To improve the health of the people in the communities we serve.

Vision

To partner with you for a lifetime of health and well-being.

Values

- **Respect** Respecting the dignity of all persons, fostering a corporate culture characterized by teamwork, diversity and empowerment.
- **Integrity** Conduct corporate and personal lives with integrity; relationships based on loyalty, fairness, truthfulness and trustworthiness.
- **Compassion** Sensitivity to the whole person, reflective of God's compassion and love, with particular concern for the poor.
- **Excellence** Continuously improving the quality of service through education, research, competent and innovative personnel, effective leadership and responsible stewardship of resources.

Texas Health is moving beyond episodic sick care, by focusing on anticipating communities' needs and offering affordable and personalized products and experiences as the organization seeks to meet consumers' health and well-being needs for their lifetime. Texas Health has elevated the needs and preferences of consumers as the unifying voice that focuses every aspect of the organization.

Tarrant/Parker Region of Texas Health Resources

Tarrant County¹ is an urban county located in the north central part of Texas. Fort Worth serves as the county seat with a population of approximately 2.1 million citizens according to the 2021 U. S. Census, population growth of 0.8 percent since 2020. Tarrant County is home to a diverse mix of cultures and heritage. Parker County² lies to the west of Tarrant County and has a population of 156,764 according to the 2021 U. S. Census, population growth of 5.8 percent since 2020. The map in Figure 1 highlights the Tarrant/Parker Region.

Facility Description

Texas Health Mansfield

Operated as a joint venture between Texas Health Resources and AdventHealth, Texas Health Mansfield believes that total health is achieved through a balance of physical, mental, social and spiritual well-being. Texas Health Mansfield includes a licensed 59-bed acute care hospital and an 80,000-square-foot medical staff office building that houses primary care and specialty practices, as well as an outpatient center that offers lab, therapy, and imaging services. Hospital services include Cardiovascular, Orthopedics, General Surgery and Women's services.

FIGURE 1. TEXAS HEALTH SERVICE AREA COUNTIES: TARRANT/PARKER REGION

Impact Since Last CHNA

The CHNA process should be viewed as a three-year cycle. An important part of that cycle is revisiting the progress made on priority topics from previous CHNAs. By reviewing the actions taken to address priority areas and evaluating the impact of these actions in the community, an organization can better focus and target its efforts during the next CHNA cycle.

The previous Texas Health CHNA was conducted in 2019. The priority areas were:

- Awareness, Health Literacy and Navigation
- Behavioral Health
- Chronic Disease

Texas Health built upon efforts from the 2019 CHNA to directly target communities and populations who disproportionately experience the prioritized health challenges identified above. Of the activities implemented, the most notable are detailed on the next page.

Behavioral Health

- **Texas Health Community Impact:** In 2019, Texas Health launched the Texas Health Community Impact initiative to address behavioral health issues and the barriers to social determinants of health for individuals residing in Texas Health designated high-need ZIP codes. Through this initiative, Texas Health has awarded over \$10M to community-based organizations to date. The aim of this Texas Health initiative is to advance the prevention and management of social, physical, and behavioral health in underserved communities, with the goal of reducing health disparities and improving health equity. The initiative calls on agencies from different sectors — education, healthcare, government, grassroots organizations, and others — to unite against the CHNA identified health and social issues.

Chronic Disease Prevention and Management

- **Evidence Based Programs – Chronic Disease Self-Management Program (CDSMP); Diabetes Self-Management Program (DSMP); Chronic Pain Self-Management Program (CPSMP) and A Matter of Balance (AMOB):** Texas Health began offering the Evidence Based Programs in 2013, in collaboration with local community partners to address the chronic disease prevention and management priority identified in the (CHNA). These nationally recognized programs enable participants to build the self-confidence and motivation they need to manage the challenges of living with a chronic disease. Participants are adults experiencing chronic health conditions such as hypertension, arthritis, heart disease, stroke, lung disease, and diabetes. Initially, the program workshops were exclusively in-person; however, telephonic, virtual, and guided self-study formats were adopted in 2020 to maintain safe distancing due to the onset of the COVID-19 pandemic. These formats continued to be the most prevalent in 2021, due to the ongoing COVID-19 pandemic. With the assistance of the local Area Agencies on Aging, eight CDSMP workshops and 18 CDSMP guided self-study formats; 15 DSMP

workshops and 12 DSMP guided self-study formats; six CPSMP workshops and four CPSMP guided self-study; and 17 AMOB workshops were offered to community members.

- **Clinic Connect:** Historically, Texas Health has funded the work of local community health clinics in our mission to improve the health of the people in the communities we serve. In 2016, Texas Health launched Clinic Connect, a streamlined process for receiving and evaluating funding requests from clinics that reach vulnerable populations and serve as outpatient resources for our acute care hospitals. The goal of Clinic Connect is to create a collaborative relationship with local non-profit community-based clinics by providing financial support, educational opportunities, information sharing, and expanded services to improve healthcare access and quality for underserved, vulnerable populations. Clinics receiving funds are required to report on specific process and outcome measures, including percentage of diabetic patients whose A1c levels are less than nine percent and the percentage of patients with blood pressure under control. Texas Health Resources awarded over \$350,000 to community clinics across the Metroplex in 2021.

- **Wellness for Life — Mobile Health Program:** The Wellness for Life mobile health teams deliver preventive and chronic disease management services traveling across the greater Dallas-Fort/Worth (DFW) area to reach medically underserved communities. The team of family nurse practitioners, registered nurses, community health workers and mammography technologists provide prevention and early detection services, and teach evidence-based practices in partnership with community-based health clinics and organizations. Utilizing state-of-the-art mobile health vehicles, the medical team delivers essential healthcare services at churches, schools, grocery stores, community centers and public parks. The ethnically and culturally diverse healthcare team creates a welcoming environment which fosters trusting relationships. In 2021, Texas Health improved access to care by delivering the following healthcare

services to community members: 10,882 COVID-19 vaccine doses, 1,772 screening mammograms, 177 cervical exams, and 68 colon kits.

- **Healthy Education Lifestyle Program (HELP):** The Healthy Education Lifestyle Program (HELP) is an innovative way of delivering diabetes and hypertension management for uninsured populations. Every HELP visit is comprised of three key components: an individual visit with a mid-level practitioner, including necessary lab testing; an education session by the nurse to increase health literacy; and social determinants of health support. HELP provides program participants with ongoing health coaching and education resources to support patients learning to effectively manage their chronic disease and to encourage them to take an active role in reducing the negative toll their chronic conditions will otherwise take on their lives. The monthly office visits ensure those who are uninsured gain access to lab tests and medications necessary to help them effectively self-manage their disease. HELP has seen impressive results, including improvement in individual bio-metric scores. In 2021, HELP was able to serve 1,475 individuals across the system.

Access, Health Literacy, and Navigation

• *Health to Housing Program: A Pathway to Healing Collaborative:*

In partnership with Austin Street Center and City Square Housing, Texas Health launched the Health to Housing program in September 2020 to provide medical respite care to homeless adults discharged from Texas Health Dallas (THD). Using a three-pronged approach, patients receive medical services such as medication management, wound care, blood pressure screening, physical therapy; case management services such as job training, connection to supplemental benefits; and appropriate housing solutions. Since launching in September 2020, the Health to Housing program has served over 57 homeless individuals.

• *YES Dallas:* The YES Dallas Initiative is a truly collaborative project aimed at reducing the barriers to physical activity by providing middle school age children in the Pleasant Grove community of Dallas with sports and nutritional resources to promote health and overall wellness. Texas Health and collaborators will increase the participation of at least 130 socio-economically disadvantaged youth in sports. The grant provides access to nutrition education, physical literacy resources, athletic training, and community education both in-person and virtually. To date this program has served over 99 adolescents.

• *Texas Health Community Vaccination Program:* Texas Health Community COVID-19 Vaccination launched in January 2021 in response to Texas Health's aim to provide equitable care with the understanding the individuals in medically underserved communities may have limited access to the COVID-19 Vaccine. The Mobile Health team included COVID-19 vaccination in its services. Partnering with approximately 74 community-based organizations, and with grant support from the Communities Foundation of Texas (CFT) and the Human Resources Services Administration (HRSA), Texas Health administered 10,878 COVID-19 Vaccines to 6,013 individuals across 210 community clinics, in addition to educating 6,310 individuals and raising awareness of the COVID-19 vaccine.

• *Texas Health Sexual Assault Nurse Examiner Program:*

The Sexual Assault Nurse Examiner (SANE) program provides compassionate and comprehensive care for patients who have experienced sexual assault. Part of the SANE department is the Safety and Well-Being Prevention Program (SWBPP) which offers violence prevention education, awareness and professional development programs to schools, businesses, and community organizations across the system. SWBPP focuses on protective and risk factors that bring awareness to violence. Topics of the classes include dynamics of a healthy relationship, teen dating violence, digital abuse and web safety, human trafficking awareness, bystander intervention training, gender socialization and violence, awareness training for parents, trauma informed response, sexual assault, and complexities of child abuse among others. To date, SANE has delivered over 69 community presentations and outreach events to more than 2,672 individuals and provided clinical services to over 776 victims of sexual assault.

• *Faith Community Nursing:* Faith Community Nursing (FCN) is a system-wide program offered by Texas Health to link faith communities with health-related resources that focus on holistic care including body, mind, and spirit. Program emphasis is placed on prevention and wellness through education, coaching, advocacy, and coordination of healthcare. Through

the strong relationships with faith organizations (churches, synagogues, mosques), the FCN program can reach people outside of the traditional hospital or clinic setting to provide education and resources that help improve the health and well-being of individuals across North Texas. FCN promotes wellness, prevention, and wholeness before, during and after disease. The program also creates safe and sacred places for healing and advocates for compassion, mercy and dignity at Christian, Jewish and Muslim congregations. In 2021, the FCN program worked with 106 congregations (reaching 131,322 people) and 297 volunteer nurses and lay health promoters to serve communities across North Texas. Flu vaccinations were given to 5,180 uninsured and high-risk community members who may not otherwise have received preventative care. In addition, over \$1.7 million in health-related cost savings and avoidance was recorded by the congregations we work with. Savings included healthcare dollars and the cost to provide for social determinants of health. Due to COVID-19, FCNs also supported faith communities with consultation and implementation of infection prevention measures and COVID vaccine education and information. Additionally, the FCN team provided nursing leadership for five of the Texas Health COVID Vaccine Clinics that vaccinated thousands of North Texas residents.

Blue Zones Project

Blue Zones Project is a community-led well-being improvement initiative that focuses on changing the environment around us to make healthy choices easier. In early 2019, Blue Zones Project work moved under the umbrella of North Texas Healthy Communities (NTHC), the community outreach arm of Texas Health that focuses on the delivery of community benefit through well-being improvement initiatives. NTHC continues to work to sustain Blue Zones Project's momentum while expanding support into high-need schools, faith communities, worksites and neighborhoods identified by Texas Health's CHNA.

During the pandemic, Blue Zones shifted its focus to address pandemic-related needs in underserved communities by distributing food, developing vaccination awareness campaigns, and promoting community vaccination clinics. Since the last CHNA, this program has engaged over 365 participating organizations and served over 95,000 individuals.

Community Feedback

The 2019 Texas Health Resources CHNA Reports and Implementation Strategies were made available to the public via the website <https://www.texashealth.org/community-engagement/community-health-improvement-chi/community-health-needs-assessment>. In order to collect comments or feedback, a unique email was used: THRCHNA@texashealth.org. No comments had been received on the preceding CHNA via the email at the time this report was written.

Methodology

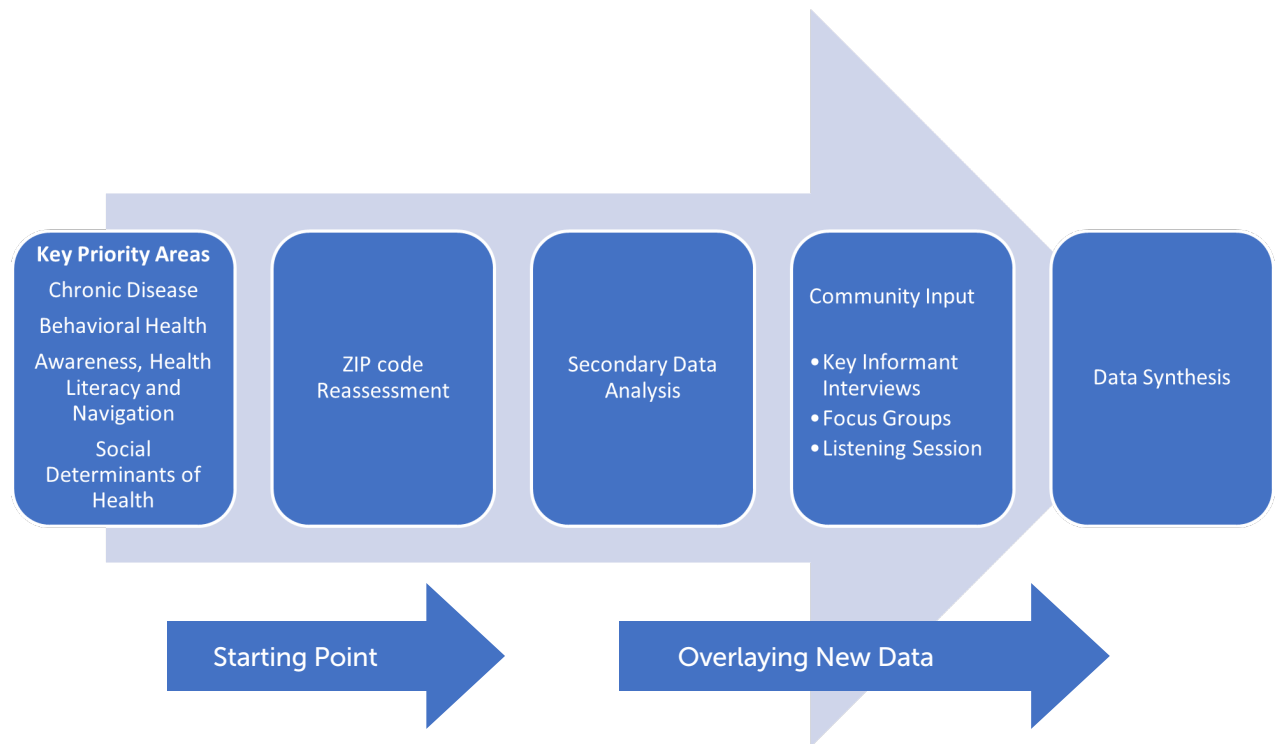

Overview

Two types of data were used in this assessment: primary and secondary data. Primary data is data collected directly from main sources in the community. Primary data was obtained through focus groups and key informant interviews. Secondary data is health indicator data that has been collected by public sources such as government health departments. Secondary data used is listed in Appendix A.

Building on 2019 CHNA Process

For the 2022 CHNA process, Texas Health built on key findings and achievements from the 2019 CHNA process and Implementation Strategy. This process included over 463 ZIP codes within the Texas Health primary and secondary service areas. In Figure 2, Texas Health, with the support of five regional community councils, utilized primary and secondary data to narrow the geography down to 56 prioritized ZIP codes. These communities were experiencing disproportionate health outcomes in the areas of Chronic Disease, Behavioral Health and Awareness, and Health Literacy and Navigation.

FIGURE 2. CHNA TIERED PROCESS

Overview of ZIP Code Reassessment

The ZIP code reassessment included the Conduent HCI project team reviewing, analyzing, and synthesizing the Health Equity Index, a tool developed by Conduent Healthy Communities Institute. This tool measures socioeconomic need and seven key indicators available for 20 counties (Collin, Comanche, Dallas, Denton, Eastland, Ellis, Erath, Henderson, Hood, Hunt, Johnson, Kaufman, Parker, Rockwall, Tarrant, Wise, Cooke, Somervell, Grayson, and Hamilton), which includes 463 ZIP codes that receives services through Texas Health hospitals and joint ventures. The following indicators were used to reassess and determine Texas Health priority ZIP codes for its 2022 cycle:

- Demographics
- Median household income
- Percent of uninsured adults
- Percent of people living below the poverty level (200 percent)
- Unemployment rate
- Percent receiving SNAP assistance
- Educational attainment for adults 25+ with a high school degree

Data were analyzed at the ZIP code level when available. Findings from the analysis were used to identify 15 counties and 83 priority ZIP codes for the 2022 CHNA process.

CHNA Process and Texas Health ZIP Code Prioritization

The CHNA process began with reviewing the 15 counties and 83 ZIP codes. HCI analyzed the ZIP codes based on the HCI inclusion criteria and Texas Health reviewed those data and ranks of the ZIP codes and the final prioritization list was created with 12 counties and 56 ZIP codes. Figure 3 illustrates how the 12 counties and 56 ZIP codes were identified.

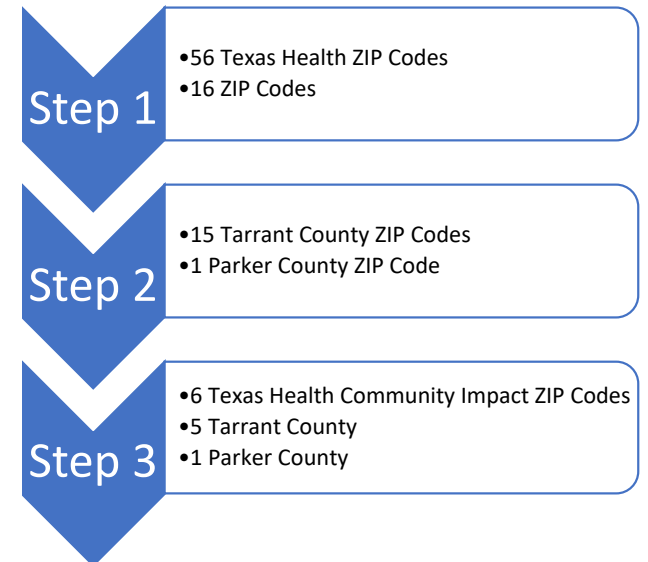

FIGURE 3. METHODOLOGY OVERVIEW

Tarrant/Parker ZIP Code Prioritization

The Tarrant/Parker Region is comprised of 16 prioritized ZIP codes: 15 in Tarrant County and one in Parker County. ZIP codes were ranked on perceived and identified need per the Health Equity Index (a measure of socioeconomic need). The results yielded 16 ZIP codes from which six community impact ZIP codes were identified. The diagram in Figure 4 summarizes the overall ZIP code prioritization process for the 2022 CHNA.

FIGURE 4. TARRANT/PARKER ZIP CODE PRIORITIZATION

Health Equity Index

Figure 5 is an illustration of the Health Equity Index (HEI) which incorporates estimates for six different social and economic determinants of health that are associated with poor health outcomes. The data, which cover income, poverty, unemployment, occupation, educational attainment, and linguistic barriers, are then standardized and averaged to create one composite index value for every ZIP code in the United States. The areas must have a population of at least 200. ZIP codes have index values ranging from zero to 100, where higher values are estimated to have the highest socioeconomic need and are correlated with poor health outcomes including preventable hospitalizations and premature death.

FIGURE 5. HEALTH EQUITY INDEX

The map in Figure 6 highlights HEI values for ZIP codes across the Tarrant/Parker Region. Darker shades of blue indicate a higher index value and thus higher levels of need within those ZIP codes. As shown in Table 1, many of the highest need ZIP codes fall within Tarrant County.

FIGURE 6: TARRANT/PARKER REGIONAL HEI MAP

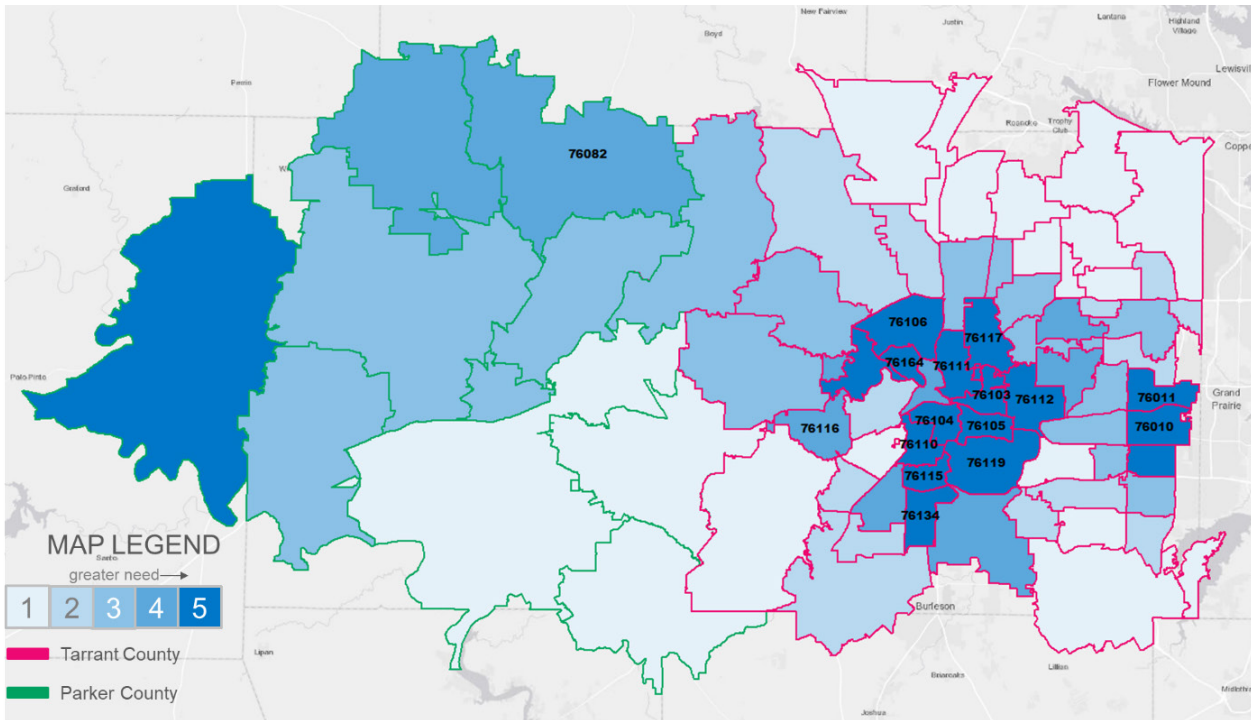

TABLE 1. HEI VALUES FOR PRIORITIZED ZIP CODES

COUNTY	ZIP CODE	HEI VALUE
Tarrant	76010	98.1
	76011	88.7
	76103	95.9
	76104	97.3
	76105	98.9
	76106	98.5
	76110	93.2
	76111	95.1
	76112	86.6
	76115	98.4
	76116	71.5
	76117	89.4
	76119	97.9
	76134	86
76164	98.8	
Parker	76082	62

Demographics

The following section explores the demographic profile of the Texas Health Tarrant/Parker Region service area. It is important to understand the demographics of a community because it can significantly impact its health profile. Communities are becoming more diverse with different races and ethnicities, gender identities, ages, and socioeconomic groups. Each component has its own unique needs and requires varied approaches to health improvement efforts³. All demographic estimates are sourced from American Community Survey one-year (2019) or five-year (2015-2019) estimates unless otherwise indicated.

3. National Academies Press (US); 2008. Institute of Medicine (US) Roundtable on Health Disparities. Challenges and Successes in Reducing Health Disparities: Workshop Summary. <https://www.ncbi.nlm.nih.gov/books/NBK215371/> DOI: 10.17226/12154

Population

According to the U.S. Census Bureau's 2015-2019 American Community Survey, the Tarrant/Parker Region had a combined population of 2,245,393. Table 2 below shows the population breakdown for the prioritized ZIP codes within the Tarrant/Parker Region. ZIP codes 76010 and 76119 are the most heavily populated ZIP codes in the region and both are located in Tarrant County.

TABLE 2 POPULATION ESTIMATES FOR PRIORITIZED ZIP CODES IN THE TARRANT AND PARKER REGION

COUNTY	ZIP CODE	TOTAL POPULATION ESTIMATE
Tarrant	76010	60,097
	76011	22,622
	76103	15,486
	76104	18,344
	76105	22,179
	76106	39,900
	76110	31,926
	76111	22,531
	76112	42,572
	76115	21,319
	76116	50,506
	76117	31,068
	76119	52,070
	76134	26,151
76164	15,488	
Parker	76082	20,194

Age

As shown in Figure 7, 24.7 percent of Parker County and 26.0 percent of Tarrant County are under 18 years old. The Tarrant/Parker Region has a similar proportion of residents under 18 compared to the state (25.5 percent) and a higher proportion compared to the nation (22.3 percent).

Figure 8 illustrates that 15.6 percent of the population in Parker County and 11.6 percent of the population in Tarrant County are adults over the age of 65. Tarrant County has a smaller proportion of older adults compared to the State of Texas (12.9 percent) and the U.S. (16.5 percent), while Parker County's proportion of residents over 65 years is larger than the proportion in Texas, while lesser when compared to U.S.

Figure 9 shows that Parker County has a smaller proportion of residents under five years old (6.1 percent) compared to Texas (6.9 percent) and a similar proportion compared to the U.S. (6.0 percent). Tarrant County has a similar proportion of residents under 5 years old (6.8 percent) compared to Texas and a larger proportion compared to the U.S.

FIGURE 7. POPULATION UNDER AGE 18

FIGURE 8. POPULATION OVER AGE 65

FIGURE 9. POPULATION UNDER AGE 5

Race/Ethnicity

The race and ethnicity composition of a population is important in planning for future community needs, particularly for schools, businesses, community centers, healthcare and childcare. Race and ethnicity data are also useful for identifying and understanding disparities in housing, employment, income, and poverty.

Figure 10 shows the racial composition of residents in Parker County and Tarrant County. Parker County has a racial composition with 82.6 percent of residents identifying as White, Non-Hispanic; 13.0 percent as Hispanic or Latino (of any race); 1.7 percent as Black or African American; 0.7 percent as Asian; and 2.8 percent as American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, "Some other race", or "Two or more races".

Tarrant County has a racial composition with 45.3 percent of residents identifying as White, Non-Hispanic; 29.5 percent as Hispanic or Latino (of any race); 17.9 percent as Black or African American; 5.8 percent as Asian; and 3.8 percent as American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, "Some other race", or "Two or more races".

FIGURE 10. RACE/ETHNICITY OF THE TARRANT/PARKER REGION

Language

Language is an important factor to consider for outreach efforts to ensure that community members are aware of available programs and services.

FIGURE 11. POPULATION (AGE 5+) THAT SPEAKS A LANGUAGE OTHER THAN ENGLISH AT HOME

Figure 11 shows the proportion of residents in the Tarrant/Parker Region who speak a language other than English at home. Both Parker County (9.0 percent) and Tarrant County (29.0 percent) have a lower percentage of residents who speak a language other than English at home compared to Texas (35.5 percent). As shown in Table 3, ZIP codes 76106 and 76164 in Tarrant County have the largest proportion of residents who speak a language other than English at home (81.6 percent and 73.7 percent, respectively). In these ZIP codes, 81.2 percent and 71.3 percent, respectively, speak Spanish at home. This is an important consideration as services and outreach efforts may be more effective if conducted in the native language of the recipient/patient/respondent.

As shown in Table 4, ZIP codes 76106 (33.0 percent) and 76164 (36.5 percent) in Tarrant County have larger portions of their populations who have difficulty speaking English at home. Tarrant County (6.3 percent) and Parker County (2.0 percent) have a smaller proportion of residents with difficulty speaking English.

TABLE 3. POPULATION (AGE 5+) WHO SPEAKS A LANGUAGE OTHER THAN ENGLISH AT HOME BY PRIORITIZED ZIP CODE

COUNTY	ZIP CODE	PERCENT POPULATION THAT SPEAKS A LANGUAGE OTHER THAN ENGLISH AT HOME	PERCENT POPULATION THAT SPEAKS SPANISH AT HOME
Tarrant	76010	62.3%	53.8%
	76011	37.6%	31.9%
	76103	44.7%	41.3%
	76104	46.2%	42.2%
	76105	54.9%	52.7%
	76106	73.7%	71.3%
	76110	57.6%	55.5%
	76111	65.1%	62.8%
	76112	26.4%	22.6%
	76115	71.1%	67.0%
	76116	21.4%	17.1%
	76117	52.4%	40.5%
	76119	43.3%	35.8%
76134	36.5%	33.4%	
76164	81.6%	81.2%	
Parker	76082	9.8%	9.0%

TABLE 4. POPULATION (AGE 14+) WITH DIFFICULTY SPEAKING ENGLISH BY PRIORITIZED ZIP CODE

COUNTY	ZIP CODE	PERCENT POPULATION WITH DIFFICULTY SPEAKING ENGLISH
Tarrant	76010	23.1%
	76011	12.8%
	76103	9.5%

Social and Economic Determinants of Health

This section explores the economic, environmental, and social determinants of health in the Tarrant/Parker Region's service area. Social determinants of health are the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life⁴.

4. Office of Disease Prevention and Health Promotion. (2014). Healthy People 2020: Social Determinants of Health. Retrieved from Healthy People 2020: <https://www.healthypeople.gov/2020/topics-objectives/topic/social-determinants-of-health>

Income

Median household income reflects the relative affluence and prosperity of an area. Areas with higher median household incomes are likely to have a greater share of educated residents and lower unemployment rates. Those with greater wealth are more likely to have higher life expectancy and reduced risk of a range of health conditions including heart disease, diabetes, obesity, and stroke. Poor health can also contribute to reduced income by limiting one's ability to work⁵.

FIGURE 12. MEDIAN HOUSEHOLD INCOME

Figure 12 shows the median household income of Parker County is \$77,503 and that of Tarrant County is slightly lower at \$67,700. Both counties have higher median household incomes than the state of Texas (\$61,874) and the U.S. (\$62,843).

5. Robert Wood Johnson Foundation. Health, Income, and Poverty. <https://www.rwjf.org/en/library/research/2018/10/health--income-and-poverty-where-we-are-and-what-could-help.html>

6. Office of Disease Prevention and Health Promotion. "Poverty | Healthy People 2020." www.healthypeople.gov/2020/topics-objectives/topic/social-determinants-health/interventions-resources/poverty.

Poverty

The Census Bureau sets federal poverty thresholds every year and varies by size of family and ages of family members. A high poverty rate is both a cause and a consequence of poor economic conditions. A high poverty rate indicates that local employment opportunities are not sufficient to provide for the local community. Through decreased buying power and decreased taxes, poverty is associated with lower quality schools and decreased business survival.⁶

Figure 13 shows the percentage of people living below the poverty level for Tarrant County (11.9 percent) and Parker County (8.1 percent). Both values are lower than the state of Texas value (14.7 percent) and the U.S. value of (13.4 percent).

Figure 14 shows the percentage of people living below the poverty level by race/ethnicity. The Hispanic/Latino,

Black/African American, American Indian/Alaska Native, and Other race/ethnicity groups of Tarrant County have higher percentages of people living below poverty level than in Parker County. White, Native Hawaiian/Pacific Islander, Asian, and Two or More Race/Ethnicity groups in Parker County have lower percentages of people living below poverty level than in Tarrant County.

FIGURE 13. PEOPLE LIVING BELOW POVERTY LEVEL

FIGURE 14. PEOPLE LIVING BELOW POVERTY LEVEL BY RACE/ETHNICITY

Food Insecurity

The Supplemental Nutrition Assistance Program (SNAP) is a federal assistance program that provides low-income families with electronic benefit transfers (EBTs) that can be used to purchase food. The goal of the program is to increase food security and reduce hunger by increasing access to nutritious food⁷.

FIGURE 15. HOUSEHOLDS WITH CHILDREN RECEIVING SNAP

Figure 15 shows the percentage of households with children under 18 years old receiving food stamps/ SNAP benefits. Tarrant County (67.1 percent) and Parker County (56.8 percent) both have slightly higher percentages than both the Texas state value (62.4 percent) and the U.S. value (50.1 percent).

7. USDA. "Supplemental Nutrition Assistance Program (SNAP) | USDA-FNS." Usda.gov, 2018, www.fns.usda.gov/snap/supplemental-nutrition-assistance-program

8. U.S. Department of Health and Human Services, Healthy People 2030. <https://health.gov/healthypeople/objectives-and-data/social-determinants-health/literature-summaries/employment>

Unemployment

The unemployment rate is a key indicator of the local economy. Unemployment occurs when local businesses are not able to supply enough appropriate jobs for local employees and/or when the labor force is not able to supply appropriate skills to employers. A high rate of unemployment has personal and societal effects. During periods of unemployment, individuals are likely to feel severe economic strain and mental stress. Unemployment is also related to access to healthcare, as many individuals receive health insurance through their employer. A high unemployment rate places strain on financial support systems, as unemployed persons qualify for unemployment benefits and food stamp programs.⁸

Figure 16 shows the percentage of unemployed workers in the civilian labor force. The percentage in Tarrant County (3.2 percent) and Parker County (3.0 percent) are similar to both the state of Texas value (3.3 percent) and the U.S. value (3.4 percent).

FIGURE 16. UNEMPLOYED WORKERS IN CIVILIAN LABOR FORCE

Education

Graduating from high school is an important personal achievement and is essential for an individual's social and economic advancement. Graduation rates can also be an important indicator of the performance of an educational system. Having a bachelor's degree opens career opportunities in a variety of fields and is often a prerequisite for higher-paying jobs.⁹

FIGURE 17. PEOPLE AGE 25+ WITH A HIGH SCHOOL DEGREE OR HIGHER

Figure 17 shows the percentage of People 25 Years or Older with a High School Degree or Higher. Both Tarrant County (86.1 percent) and Parker County (88.6 percent) are higher than the state of Texas value (83.7 percent), but only Parker County is higher than the U.S. value (88.0 percent).

FIGURE 18. PEOPLE AGE 25+ WITH A BACHELOR'S DEGREE OR HIGHER

Figure 18 shows the Percentage of People 25 Years or Older with a Bachelor's Degree or Higher. While Tarrant County (32.3 percent) is higher than the state of Texas value (29.9 percent) and similar to the U.S. value (32.1 percent), Parker County (26.4 percent) is lower than all three comparisons.

Transportation

Lengthy commutes cut into workers' free time and can contribute to health problems such as headaches, anxiety, and increased blood pressure¹⁰. Longer commutes require workers to consume more fuel, which is both expensive for workers and damaging to the environment¹¹.

FIGURE 19. MEAN TRAVEL TIME TO WORK (MINUTES)

Figure 19 shows the mean travel time to work for Parker County (31.8 minutes) and Tarrant County (27.4 minutes). Both counties are higher than the state of Texas value (26.6 minutes) and the U.S. value (26.9 minutes).

Primary Methodology

Community Key Informant Interviews

Key informant interviews (KIIs) were conducted with leaders and staff from organizations that provide services directly to the community and officials that represent governmental and non-governmental entities. Interviewees invited to participate were recognized as having expertise in public health, special knowledge of community health needs, representing the broad interests of the community served by the hospital, and/or being able to speak to the needs of medically underserved or vulnerable populations.

Spanning all Texas Health regions, 41 individuals agreed to participate in the key informant interview process. The following organizations participated in the interviews.

The 41 KIIs took place October 2021 through March 2022. Each of the 41 interviews was conducted via web conference. The questions focused on the interviewee’s background and organization, the biggest perceived health needs and barriers of concern in the community, and the impact of health issues on the populations they serve. A list of the questions asked in the KII can be found in Appendix B.

Alzheimer’s Association	Lewisville ISD

Eastside Ministries	Texas Health Community Impact Board
Erath County Extension	Texas Health Hospital Rockwall
Johnson County Family Crisis Center	Wise County
Lakepointe Church	YMCA Tarrant

Key Informant Analysis Results

Transcripts captured during the KII were uploaded to the web-based qualitative data analysis tool, Dedoose¹³. Interview excerpts were coded by relevant topic areas and key health themes. The approach used to assess the relative importance of the needs discussed in the interviews including the frequency by which a topic was described by the key informant as a barrier or challenge, and the frequency by which a topic was mentioned per interviewee.

13. Dedoose Version 8.0.35, web application for managing, analyzing, and presenting qualitative and mixed method research data (2018). Los Angeles, CA: Sociocultural Research Consultants, LLC www.dedoose.com

Community Focus Groups

Texas Health and Conduent HCI conducted focus groups to gain deeper insight into perceptions, attitudes, experiences, or beliefs held by community members about their health. It is important to note that the information collected in an individual focus group is exclusive to that group and is not representative of other groups. A total of 19 virtual and in-person focus groups were conducted November 2021 through May 2022 across all regions. In the Tarrant/Parker region, there were three focus groups conducted, two English-speaking groups and one Spanish-speaking group. Table 10 shows the three focus groups completed, which included a total of 16 participants. Individuals recruited for focus groups included those who were living in and/or working in the Tarrant/Parker Region. The virtual and in-person focus group sessions lasted 60 minutes.

TABLE 10: TARRANT/PARKER REGION FOCUS GROUP COMPLETED

NUMBER OF SESSIONS	FACILITATION LANGUAGE	TOTAL COMMUNITY PARTICIPANTS
2	English	11
1	Spanish	5

An array of residents and employees from the Tarrant/Parker Region provided insights when facilitators asked a series of nine questions to prompt discussion on top community health issues, barriers/challenges to health, and the impact of COVID-19. Facilitators recorded the sessions and notes from the focus groups and uploaded them to the web-based qualitative data analysis tool, Dedoose. Focus group transcripts were coded using a pre-designed codebook, organized by themes, and analyzed for significant observations. The relative importance of health and/or social need was determined, in part, by the frequency of the topic or issue discussed across all three focus groups.

Table 11 illustrates the top themes from the Tarrant/Parker Region analysis of the transcripts:

TABLE 11: KEY INFORMANT INTERVIEWS & FOCUS GROUP THEMES — TARRANT/PARKER REGION

TOP HEALTH CONCERNS/ISSUES	SOCIAL DETERMINANTS OF HEALTH	IMPACTED POPULATIONS
<p>Healthcare Access and Quality Lack of insurance/underinsured, transportation barriers, lack of providers—specifically bilingual, dentists, mental health providers, lack of education in different languages</p> <p>Mental Health & Mental Disorders Isolation accelerate health conditions in elderly population (dementia, more falls, more anxiety), suicide increase amongst teenagers and young Hispanic men, lack of availability of affordable counseling resources, substance abuse disorder treatment programs</p> <p>Chronic Conditions Heart conditions: hypertension, high blood pressure due to stress, diabetes</p> <p>COVID-19 Impact Mental health/ substance abuse, financial impacts due to employment loss which led to loss of health insurance & childcare needs, delay in care/access to healthcare, food insecurity</p>	<p>Food Insecurity/food accessibility</p> <p>Housing</p> <p>Transportation</p> <p>Lack of or limited insurance</p> <p>Economic instability/employment</p> <p>Language barriers</p>	<p>Black/African Americans: not serviced as well as others due to discrimination/bias/racism</p> <p>Groups experiencing abuse: women/children, sexual assault victims</p> <p>Hispanic/Latino population</p> <p>Low-income families</p> <p>Migrant/Immigrant/Refugee/Undocumented populations: fear of government in seeking care/services</p> <p>Older adults</p> <p>People experiencing homelessness</p> <p>Uninsured/underinsured/coverage gap groups: low-income families making too much money to qualify for Medicaid, but can't afford insurance</p>

Listening Session

Texas Health and Conduent HCI conducted an online survey with key community stakeholders to capture quantitative data in relation to Texas Health 2019 CHNA and Implementation Plan. Conduent HCI hosted a follow-up virtual discussion with the stakeholders to capture qualitative insights and feedback. Texas Health identified the community partners and extended the invitations for this discussion. Because health and wellness can be influenced by environmental matters existing outside of healthcare, a wide variety of community partners were invited to participate in the listening session. The main goal of the listening session was to determine opportunities to strengthen collaborations within the communities served by Texas Health Resources Health System.

A total of 13 participants completed the online survey and two attended the follow-up session. Table 12 lists the 13 organizations who participated in the Listening Session. In Tarrant County, 61.54 percent of the organizations provide direct services to the community and 30.77 percent in Parker County.

Invited community leaders were from the following sectors: education, non-profit, philanthropy, for-profit, and healthcare. At the virtual session, participants provided facilitators with additional feedback when asked questions about the results of the survey, what Texas Health was doing well, areas of opportunities in the priority areas, and what Texas Health could do to improve the awareness of the CHNA to partnering organizations and the community. Appendix B provides the detailed results of the listening session.

Prioritization Process

Initial ZIP Code Prioritization

To identify high-need ZIP codes within and outside of the Texas Health Resources service areas and to narrow the focal area from 463 ZIP codes across 12 counties to 83 ZIP codes, then to 56 ZIP codes, Texas Health utilized the SocioNeeds Index® Suite as well as other socio-demographic data and key health indicators. Of the 56 ZIP codes across the 12-county area that were considered, 16 of them were identified as high priority ZIP codes and of those, six were identified as the community impact ZIP codes from the Tarrant/Parker Region. Figure 24 demonstrates the prioritization steps.

FIGURE 24. TEXAS HEALTH RESOURCES 2022 CHNA PRIORITIZATION PROCESS

Prioritization Results

Texas Health recognizes the role that systems can play in addressing social determinants of health as well as their impact on health outcomes across a broader community. Social determinants were intentionally considered as part of the data collection process with the goal of determining which social determinants of health are present in the community and how they contribute to prioritized health needs. By pinpointing specific ZIP codes to address the social determinants of health that often result in conditions such as chronic disease and premature death, Texas Health is striving to generate community-driven, collaborative solutions that break down traditional silos and address the clinical and social needs of individuals living in North Texas.

Prioritization to Final ZIP Codes and Health Priorities

In addition to considering the cumulative results of the quantitative and qualitative data collected throughout the CHNA process, Texas Health selected ZIP codes in each region based on criteria that included: 1) availability of resources, 2) availability of partners, 3) community readiness, 4) impact opportunity and 5) health needs in one or more of the prioritized health areas. In this region, the six ZIP codes that were chosen as the final target areas were 76010, 76011, 76104, 76105 and 76119 and in Tarrant County and 76082 in Parker County. Each of the ZIP codes identified fall within Texas Health service area. In addition to narrowing down the focus geographically based on evidence and the criteria mentioned above, Texas Health worked with the Texas Health Community Impact Leadership Council for the Tarrant/Parker Region in selecting issues that fell within the prioritized health areas of Awareness, Health Literacy and Navigation, Behavioral Health, and Chronic Disease. They also considered any social determinants of health that may contribute to these issues. Based on these considerations, the Texas Health Community Impact Leadership Council for the Tarrant/Parker Region elected to focus on Access to Healthcare, Chronic Disease, and Access to Healthy Foods focusing on low-income communities across all four ZIP codes. Table 13 lists the target ZIP codes and health priority areas.

TABLE 13. HEALTH PRIORITY AREAS IN THE TARRANT/PARKER REGION

COUNTY	ZIP CODE	HEALTH PRIORITY AREA
Tarrant	76010	• Access to Healthcare, including access to mental health services
	76011	
	76104	• Chronic Disease
	76105	
	76119	
Parker	76082	• Food Insecurity/Access to Healthy Foods

Health Priority Areas

The following section provides a deeper look into each health priority to understand how findings from the primary and secondary data led to the health topic becoming a significant need. Texas Health partners with several community-based organizations (CBOs) across the region. The Texas Health Community Impact Leadership Councils are comprised of key leaders from these CBOs, who have an understanding of the community needs and are valued and trusted by residents, leaders, faith communities, and organizations. With their input, we can better understand each region's health needs to design and implement upstream solutions. The priorities are presented below.

Access to Healthcare

Access to Healthcare was selected as a priority area for the Tarrant/Parker Region. Healthcare access and quality is the connection between people's access to care, understanding of healthcare services, and their own health¹⁴. Access to healthcare services was identified as a top concern in the Tarrant/Parker Region KII and focus groups. One of the most common problems in gaining access to health services was lack of transportation. Some barriers identified in the primary data collection are listed below.

Barriers

- Aging populations not able to access medical services due to lack of transportation
- Difficult for individuals/families to go to doctor appointments/follow-ups due to one vehicle homes or no vehicles
- Lack of financial resources (cost) to gain access to public transportation services
- Lack of public transportation in rural areas
- Underinsured, uninsured
- Low income populations

14. Centers for Disease Control and Prevention

Mental Health

Improving quality of life in adults 18+ by improving access to mental health services is another focus of the Tarrant/Parker Region. Mental Health and Mental Health Disorders are terms used in a spectrum of health conditions which are each distinct yet often co-occurring and overlapping¹⁵. Mental Health was identified as a top health concern impacting the Tarrant/Parker communities by key informants and focus group participants. Mental health was discussed throughout a variety of health issues. Some challenges/barriers are listed below.

Barriers

- Isolation accelerated health conditions in the elderly population (dementia, more falls, more anxiety)
- Mental toll of racism on Black/Brown communities
- Suicide increases amongst teenagers, and young Hispanic men
- Minimal availability of affordable counseling resources, substance use disorder treatment
- Increase in anxiety and depression with absence of healthy coping skills

Mental Health: HCI's Mental Health Index

It is important to note that Mental Health can be affected by a variety of socioeconomic factors including income, social support, socioeconomic status, gender identity, disability status, and stress caused by structural racism and other systemic barriers¹⁶. Conduent's Mental Health Index (MHI) is a measure of socioeconomic and health factors correlated with self-reported poor mental health. ZIP codes have index values ranging from zero to 100, where higher values are estimated to have the highest socioeconomic need and are correlated with poor health outcomes including preventable hospitalizations and premature death. Based on the MHI, in 2021, ZIP codes are ranked based on their index value to identify the relative levels of need, as illustrated by the map in Figure 25. As shown in table 14, the highest need ZIP codes in this region are located mostly in Tarrant County. The Mental Health Index can be used in addition to the KIIs and focus group data shown to help direct mental health resources within the region.

FIGURE 26: TARRANT/PARKER REGION: MENTAL HEALTH INDEX

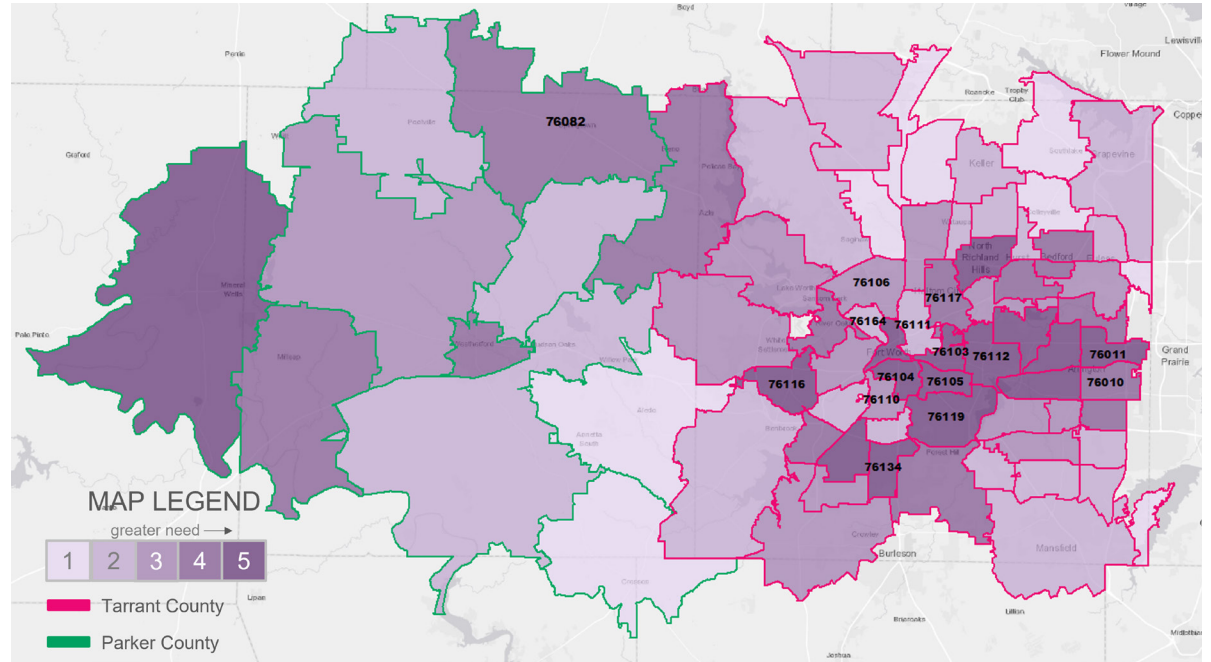

TABLE 14: TARRANT/PARKER PRIORITIZED ZIP CODES: MENTAL HEALTH INDEX VALUES

COUNTY	ZIP CODE	MHI VALUE
Tarrant	76010	48.4
	76011	67.8
	76103	69.7
	76104	78.4
	76105	70.2
	76106	32.2
	76110	35.4
	76111	25.1
	76112	86.7
	76115	27.7
	76116	81.0
	76117	53.0
	76119	83.9
	76134	68.5
76164	26.4	
Parker	76082	47.9

Chronic Disease

Chronic diseases include conditions that last one year or longer and require on-going medical attention or limit activities of daily living or both¹⁷. Chronic conditions (high blood pressure, diabetes) are focus areas for the Tarrant/Parker Region and were top concerns in the KII and focus groups. Some barriers identified are listed in Table 15.

TABLE 15: KEY FINDINGS FROM PRIMARY DATA

HIGH BLOOD PRESSURE	DIABETES
<ul style="list-style-type: none"> Heart conditions: Hypertension, high blood pressure due to stress Heart Disease/ High Blood Pressure exacerbated by COVID-19 Language-not able to speak English, health provider not able to communicate in same language (Spanish) Lack of access to technology-not having access to computers/ technology Low income 	<ul style="list-style-type: none"> Diabetes management-affecting minority communities (African American and Hispanic populations) Diabetes management compounding low-income populations, language(difficulty access services in Spanish) barriers, technology access, generational cycle of poor nutrition and weight management Cost of insulin (unaffordable or inaccessible) Lack of access to medical support and educational materials

17. About Chronic Diseases, 2022. Centers for Disease Control and Prevention. <https://www.cdc.gov/chronicdisease/about/index.htm>

18. Feeding America. (2022). What is food Insecurity?. <https://www.feedingamerica.org/hunger-in-america/food-insecurity>

Food Insecurity/Access to Healthy Foods

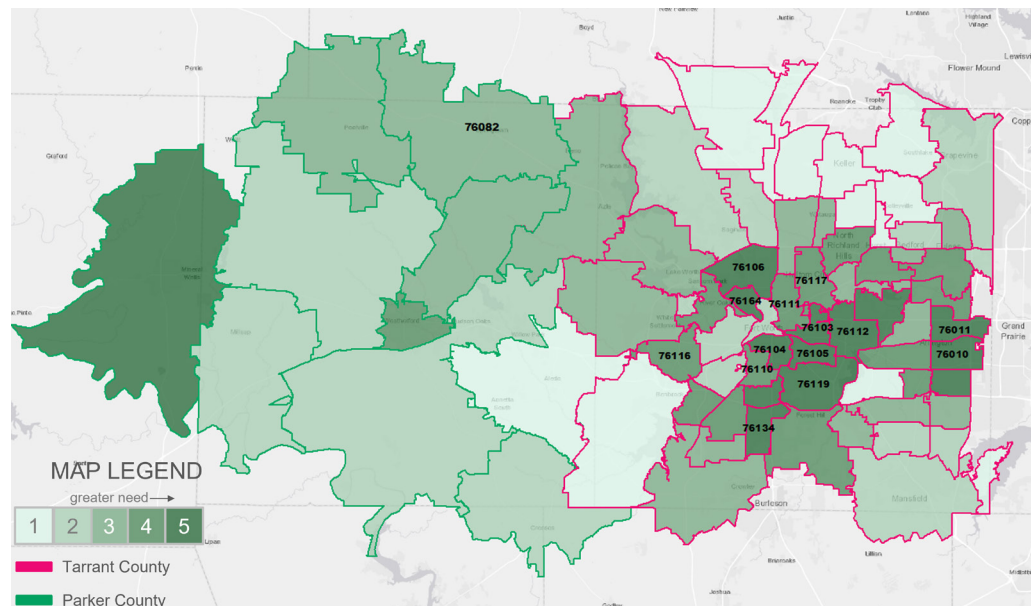

Food insecurity is defined as a lack of consistent access to enough food for every person in a household to live an active and healthy life¹⁸. Food Insecurity was selected as a focus area in the Tarrant/Parker Region and was a top concern in the KII and focus groups. Many communities face barriers to accessing food due to living in food deserts, rising cost of food, poverty, unemployment, or low income. In some of the 2021-2022 focus groups, participants indicated that because of the COVID-19 pandemic, accessing food was even more challenging for older adults/seniors, low-income families, people experiencing homelessness and Hispanic/Latino populations.

Conduent's Food Insecurity Index (FII) estimates areas of low food accessibility correlated with social and economic hardship. ZIP codes have index values ranging from zero to 100, where higher values are estimated to have the highest socioeconomic need and are correlated with poor health outcomes including preventable hospitalizations and premature death. In this index, ZIP codes are ranked based on their index value to identify the relative levels of need, as illustrated by the map in Figure 26. As shown in Table 16, most of the prioritized ZIP codes in this region are identified as having the highest economic and social burden for the area. This affects Tarrant County more than Parker County.

TABLE 16 . FOOD INSECURITY INDEX VALUES FOR THE TARRANT/PARKER REGION

COUNTY	ZIP CODE	FII VALUE
Tarrant	76010	95
	76011	90.8
	76103	86.3
	76104	94.6
	76105	96.8
	76106	91.1
	76110	69.3
	76111	67.8
	76112	89.6
	76115	94.8
	76116	73.3
	76117	71.5
76119	94	
76134	83	
76164	84.8	
Parker	76082	48.8

FIGURE 26. FOOD INSECURITY INDEX MAP

Data Limitations

Conduent HCI made substantial efforts to comprehensively collect and analyze data for this assessment. Although there is a wide range of health and health-related areas, there may be varying scope and depth of secondary data indicators and findings within each topic. Data sources do not all function, analyze and categorize information the same way which may lead to variations in results.

Secondary Data

When analyzing secondary data, some health topic areas have a robust set of indicators, while others may have a limited number of indicators available. Population health and demographic data are often delayed in their release, so data is presented for the most recent years available for any given data source. There is also variability in the geographic level at which data sets are available from census tracts or ZIP codes to statewide or national geographies. Whenever possible, the most relevant localized data is reported. Some datasets are not available for the same time span or at the same level of localization due to variations in geographic boundaries, population sizes, and data collection techniques. The Index of Disparity, used to analyze the secondary data, is also limited by the availability of subpopulation data from the data source. In some instances, there was no subpopulation data for indicators, while a select number of race/ethnic groups had minimal values.

Primary Data

For the primary data, efforts were made to include a wide range of secondary data indicators and community member expertise areas. KII and focus groups were conducted in all five regions of the Dallas/Fort Worth area.

Opportunities for On-Going Work and Future Impact

While identifying solutions, barriers and disparities are critical components in assessing the needs of a community, it is equally important to understand the social determinants of health and other upstream factors that influence a community's health as well. The challenges and barriers faced by a community must be balanced by identifying practical, community-driven solutions. These factors come together to inform and focus strategies to positively impact a community's health. The following section outlines opportunities for on-going work in the Tarrant/Parker Region as well as potential for future impact.

Solutions

This section highlights responses from the key informant interview and focus group participants when asked about ways Texas Health could help to improve the health of residents in their community. Responses included:

- Advocacy
 - » More advocacy at federal/state level to bring greater awareness to create more funding & solutions for dementia
 - » Support for public school funding; voting on 4 bond packages to strengthen public schools
 - » Increased involvement with state/federal legislative policy (if Texas Health is working in these spaces, they need to have a voice at the table in Austin and in D.C. that is loud and not overlooked)
- Partnerships
 - » Establishing partnerships to facilitate/offer internships in medical field; identify educational institutions to prepare individuals for medical field jobs
 - » Partnership with community center to connect people with services (vaccines, mental health counseling, mammograms, services for diabetics)
 - » Partnering for health fair type events at Tarrant County College campuses (educational sessions, trainings, informational sessions, blood pressure checks/screenings)
- Funding
 - » Funds to hire community health worker/ additional social workers to do resource navigation—prescription enrollment, programming
 - » Funding professional positions at non-profits i.e. grant administrator
 - » Financing postcards with clinic advertised in Spanish and English, resources to do a mailing to promote events, translating materials to Spanish

- Community Education
 - » Educational literature materials to send to colleges to distribute amongst staff
 - » Health trainings/sessions at monthly meetings (college can host events for health education sessions with Texas Health as a partner/educator i.e. breast cancer awareness month)
 - » Diabetes educational materials
 - » Health fairs, on-site nutritional classes, educational workshop, farmers market
- Mobile Care Units
 - » Stationed one to two days on each college campus
 - » Bringing mobile clinics near central community points to reduce barriers/increase trust (i.e. Hispanic community utilizes specific supermarkets)
 - » Pop-up clinics within community centers, renting space in places already in these neighborhoods (churches, non-profit buildings)

Disparities and Barriers

Significant community health disparities were assessed in both the primary and secondary data collection processes as described in the Social and Economic Determinants of Health section of this report. Potential disparities in the Tarrant/Parker Region include people living below the poverty level, households receiving food stamps/SNAP benefits with children under 18 years old, unemployment, and transportation. Identifying these data driven disparities at the regional level helps to identify the social and economic disparities that are important to consider during prioritization and will inform future efforts as well. Barriers to health and well-being that community leaders and residents raised across the primary data sources reinforced the findings in the secondary data disparities analysis. The primary barriers included:

- Challenges with transportation, including personal access to vehicles and public transportation
- Affordable housing, lack of affordable options, increasing prices/rent with increase in wages
- Delay in care/access to health services, unaffordable costs of medications, loss of insurance due to unemployment, language, difficulty accessing services in Spanish)
- Lack of local healthy foods sources, food deserts
- Childcare, unaffordable daycare for families leading to inability to work

While there may be resources and services available, they are predominantly centralized, and access is challenging in certain areas. The disparities and challenges highlighted in this section should be viewed as opportunities for impact, which can be integrated within the work Texas Health has initiated. These areas of opportunity will be considered for future investments, collaborations and strategic plans, moving Texas Health closer towards the goal of building healthier communities.

Introduction

At the time that Texas Health began its CHNA process, the state of Texas and the nation were continuing to deal with the novel coronavirus (COVID-19) pandemic. The process for conducting the assessment remained fundamentally the same. However, there were some adjustments made during the event to ensure the health and safety of those participating.

Pandemic Overview

On March 13, 2020, a U.S. national emergency was declared over the novel coronavirus outbreak first reported in the Wuhan Province of China in December 2019. Officially named COVID-19 by the World Health Organization (WHO), WHO declared COVID-19 a pandemic on March 11, 2020. To learn more about COVID-19 hospitalization, vaccinations, cases, and deaths in Texas, visit [Texas Department of State Health Services](#)¹⁸. Upon completion of this report in May 2022, the pandemic continued to be a health crisis across the United States and in most countries.

Community Insights

The CHNA project team looked for additional sources of secondary data and gathered primary data to provide a snapshot of the impact of COVID-19 on the Texas Health Resources System service area. These data were collected from October 2021 to May 2022. Findings are reported below.

Unemployment Rates

For the Tarrant/Parker Region, unemployment rates rose between March and April 2020 when stay-at-home orders were first announced. Illustrated in Figure 27 below, as counties began slowly reopening some businesses in late 2020, the unemployment rate gradually began to decrease. As of early 2022, unemployment rates have stabilized and are close to pre-pandemic rates. When unemployment rates rise, there is a potential impact on health insurance coverage and healthcare access if jobs that are lost include employer-sponsored healthcare.

Tarrant/Parker Region Community Feedback

Both KII and focus group sessions included questions to capture insights and perspectives on the health needs of the Tarrant/Parker Region. Participants were specifically asked about the biggest challenges their households were currently facing during COVID-19.

Key Informant Interviews and Focus Group Input

Key informants and focus group participants were asked to identify issues that were currently the biggest challenge for their households because of the COVID-19 pandemic. Data was collected between October 2021 and May 2022. Results below reflect both KII and focus group data combined.

COVID-19 Impact or Challenges

- **Delay in Care/Access to Healthcare**
 - » Overall stress exacerbated chronic conditions (i.e. diabetes, cancer, hypertension)
 - » Unaffordable costs of medication (insulin), loss of insurance due to loss of jobs, language barriers (difficulty accessing services in Spanish)
 - » Existing health disparities exacerbated for already under-resourced communities (immigrants fearful of seeking healthcare, African Americans with comorbidities due to systemic racism in healthcare, low-income families)
- **Mental Health/Substance Abuse**
 - » Isolation accelerated health conditions in the elderly population (dementia, more falls, more anxiety)
 - » Mental toll of racism on Black/Brown communities
 - » Suicide increases amongst teenagers, and young Hispanic men
- » Minimal availability of affordable counseling resources, substance use disorder treatment
- » Increase in anxiety and depression with absence of healthy coping skills
- **Violence/Abuse**
 - » Domestic violence, gender-based violence intimate partner violence, child abuse
 - » Increase in the frequency and severity of violence leading to serious health consequences for women (issues with pregnancy, traumatic brain injury, death)
 - » Increase in gun violence
 - » Domestic violence transcends social class, but need for shelter intervention exists more amongst those who struggle with housing and are resource deprived
- **Misinformation/Mistrust in Healthcare System**
 - » Affects access to care as people are reluctant to trust hospitals (misinformation from Facebook, radio and news sources), politicization of the pandemic

COVID-19 Socioeconomic Challenges

- **Childcare:** unaffordable daycare for families leads to inability to work (parents choosing between childcare or work)
- Technology/internet barriers
- Transportation
- **Food insecurity/food accessibility:** food deserts, rising cost of food
- **Financial/economic impacts:**
 - » Unemployment led to loss of health insurance/loss of income
 - » Low wage jobs do not offer benefits (health insurance)
- **Housing:**
 - » Loss of employment led to loss of income, which led to inability to keep up with rent/mortgage payment, led to evictions/displacement
 - » Lack of affordable options
 - » Increasing housing prices/rent without increase in wages

Recommended Data Sources

As local, state, and national data are updated and become available, these data can continue to help inform approaches to meeting existing and developing needs related to the pandemic. Recommended data sources are included below.

Looking Ahead

A total of 56 high-need ZIP codes were initially prioritized across the five Texas Health Regions and will continue to inform the work into the future. The purpose of the deeper dive into 16 community impact ZIP codes during this CHNA process was to purposefully identify areas of impact where place-based programs could be built, grown and replicated. While this strategically focused work is being implemented, Texas Health will continue working with Texas Health Community Impact Leadership Council of the Tarrant/Parker Region to revisit data findings and community feedback in an iterative process. Additional opportunities will be identified to grow and expand existing work in prioritized community impact ZIP codes as well as implementing additional programming in new areas. These on-going strategic conversations will allow Texas Health to build stronger community collaborations and make smarter, more targeted investments to improve the health of the people in the communities we serve.

Conclusion

The CHNA for the Tarrant/Parker Region utilized a comprehensive set of secondary data indicators to measure the health and quality of life needs for the Tarrant/Parker Region's primary service area and beyond. Furthermore, this assessment was informed by input from knowledgeable and diverse individuals representing the broad interests of the community. Texas Health will review these priorities more closely during the Implementation Strategy development process and design a plan for addressing these prioritized need areas moving forward.

Texas Health invites your feedback on this CHNA report to help inform the next CHNA process. If you have any feedback or remarks, please send them to THRCHNA@texashealth.org
