

Texas Health Community Health Improvement (CHI)

Mobile Health – Wellness for Life™

Achievements | 2021

Program Objective

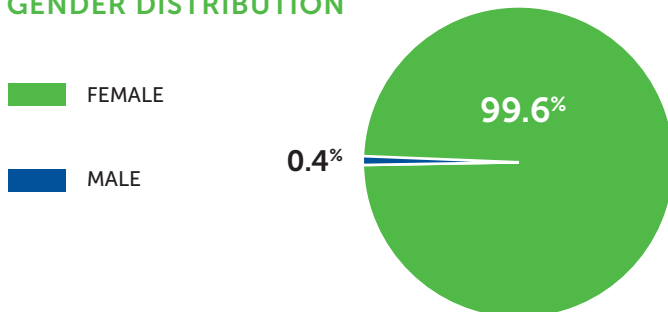

The Mobile Health – Wellness for Life™ program aims to improve access to quality preventive care services to adults 18+ years across Texas Health's service areas. The program provides screening services including mammograms, well female and male exams, colon cancer screenings, and skin cancer screenings.

Statement of Need*

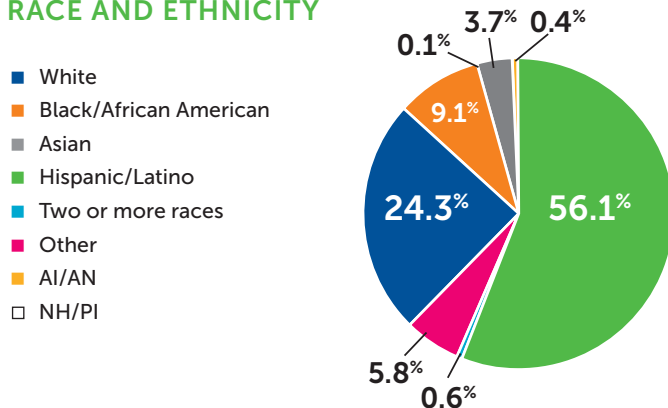

Mobile Health Clinics (MHCs) have been cited as a viable and valuable model because of their ability to straddle between community-based and clinical settings, thereby enabling them to develop essential networks to address both the social and medical determinants of an individual's health. There is also evidence that MHCs are associated with cost reduction on avoidable ED visits. In addition to reduction in hospitalization periods and readmission rates.
